

My opinion about ERASMUS+ program

At the beginning I want to tell about my great experience which gave me Erasmus+ travel. The country what I chose was Latvia and the city was Riga.

Riga is a beautiful city with a lot of interesting places and individual features. The city is very clean and air is very fresh, because Baltic sea covers the town. When it was nice free day with perfect weather ,it was really unforgettable to walk around the centrum of the city. Those green and clean parks, beautiful historical buildings, street artists and uncountable tourists who want to see those perfect things too. Now, I have got very nice memories from Riga.

And what about studying?

I have studied in the TSI.

My field of studying is

“Computer science”

The level of studying in the TSI is very high. Teachers really love their work and they gave me as much useful knowledge and experience as it was possible and even more. Subjects were very important and interesting and there was no subject which could

be useless for me. My level in programming and in other computer science directions grew up and language skills I have improved also ,of course 😊

Now I have a lot of friends from Latvia and I keep relationship with them all time.

ERASMUS+ program is a very nice possibility for students who want to have useful experience from abroad, this program give you everything what you need: the Grant ,in some cases hostels or dormitories for living, people who can help you in any moment. I am so happy that I was an Erasmus student .I thank a lot my native institute coordinators from international office for helping in every problem which I had and I thank Erasmus+ founders for that travel which I will remember all my life 😊
